Module 1 Instructions

After completing Module 1, students should be able to:

1. Learn about the online course and about others in the class
2. Define the terms Operations Management and Supply Chain and why they are important
3. Identify similarities and differences between production and service operations
4. Identify the three major functional areas in organizations and how they interrelate
5. Discuss and compare organization strategy and operations strategy
6. Define the different types of productivity and know how to calculate them
7. Define the term quality as it relates to products and as it relates to services
8. Distinguish the good and bad costs associated with quality
9. Describe the Six Sigma methodology and the various quality tools

Module 1 supports the following course learning objectives

1. Define the different terms in Operations Management
2. Describe the difference between Operations and Supply Chain Management
3. Identify the role of Operations in an organization and how it relates to other functions
4. Describe the assumptions, inputs, and outputs of the different quantitative models
5. Demonstrate the need to focus on the process, regardless if it is a product or service
6. Solve problems using the right decision making model and interpret the results

Instructions

1. Read Chapters 1, 2, and 9 and the corresponding Power Point slides
2. Do the Practice Problems for Chapters 2 and 9
3. Look at the Productivity Example in Excel (Optional)
4. Take Quiz 1
5. Post to Discussion 1
